

## Activity 1.1 Spot the energy

### Identifying forms of energy

Watch the animated scene in the *Student Digital* carefully

1. How many different types of energy can you see?

2. Think back over this exercise. What clues suggested energy was involved in different parts of the scene?

The *Find out More* link provides a summary of some of the energy forms you have seen.

Now apply your understanding to the exhibits that your teacher has set up in your classroom. For each exhibit describe the energy forms that you observe in the table below.

Exhibit name	Energy forms present
